NEW INNOVATIVE APPLICATION BROCHURE  
FOR GEOSYNTHETICS  
IN HYDRAULIC ENGINEERING

For using geosynthetics in hydraulic engineering Naue Fasertechnik GmbH & Co. KG have published a new applications and design brochure. The brochure describes the many applications for geosynthetics along with detailed cross sections for coastal protection, use in flowing waters, dykes and water retention.

Another main focus of the Hydraulic Engineering Brochure is the design and specification chapters in which calculations for needle punched Terrafix® geotextiles and Bentofix® Geosynthetic Clay Liners are described. Also new applications such as the underwater installation of geosynthetics and geotextile sand containers are detailed.

This Hydraulic Engineering Brochure is the next in a series of application and design brochures including Landfill Design, Groundwater Protection and Civil Engineering.

The brochure is available from the beginning of July and can be requested from:
